

Sensing your environment

Ava and Chip learnt about **Sensors** - when you are next out on a walk, try the following activity to understand more about how your body senses the environment. Record your answers in the third column.

	<p>Sight - What can you see?</p>	
	<p>Smell - What can you smell?</p>	
	<p>Sound - What can you hear?</p>	
	<p>Taste - What can you taste?</p>	
	<p>Touch - What can you touch?</p>	

Now think about all of the data that your senses have collected. Combine all of that data. What information can you provide about your walk?
